Lab Assignment 08

Inspiring Excellence

Course Code:	CSE111
Course Title:	Programming Language II
Topic:	Inheritance
Number of Tasks:	12 (Classwork: 06, Homework: 06)

[Submit all the Coding Tasks (Homework: Task 1 to 5) in the Google Form shared on buX before the next lab.]

[You are not allowed to change the driver codes of any of the tasks]

CLASSWORK

Task 1

Complete the class ${\bf Circle}$ so that the desired outputs are generated properly.

Given Code	Expected Output
<pre>public class shapeTester { public static void main(String[] args) { Shape s = new Shape(); s.name = "Mobius Strip"; s.color = "Blue"; s.displayInfo(); System.out.println("1=========="); Circle c = new Circle(); System.out.println("2=========="); c.name = "Circle"; c.color = "Red"; c.radius = 5; c.displayInfo(); System.out.println("3=========="); c.area(); }</pre>	Name: Mobius Strip Color: Blue 1====================================
<pre>public class Shape { public String name; public String color; public void displayInfo() { System.out.printf("Name: %s\nColor: %s\n", name, color); } } public class Circle extends Shape { //Your Code Here }</pre>	

Task 2

Given the following classes, write the code for the Vehicle2010 class to print the following output when we run the Vehicle2010User class.

Driver Code and Parent Class	Output
<pre>public class Vehicle2010User{ public static void main(String[] args){ Vehicle2010 car1 = new Vehicle2010(); System.out.println(car1); car1.moveLowerLeft(); System.out.println(car1); Vehicle2010 car2 = new Vehicle2010(); System.out.println(car2); car2.moveUpperRight(); System.out.println(car2); car2.moveLowerRight(); System.out.println(car2); } public class Vehicle{ public int x; public int y; public void moveUp(){ y = y+1; } public void moveDown(){ y = y-1; } }</pre>	(0,0) (-1,-1) (0,0) (1,1) (2,0)
<pre>public void moveLeft(){ x = x-1; } public void moveRight(){ x = x+1; } public String toString(){ return "("+ x + ","+ y + ")"; } </pre>	

Given the following classes, write the code for the BBAStudent class so that the following output is printed when we run the TestStudent class.

Driver Code and Parent Class	Output
<pre>public class Student{ private String name = "Just a Student"; private String department = "nothing";</pre>	Name: Default Department: BBA 1 Name: Humty Dumty Department: BBA
<pre>public void setDepartment(String dpt){ this.department = dpt;</pre>	2Name: Little Bo Peep Department: BBA
<pre>public void setName(String name){ this.name = name; }</pre>	
<pre>public void details(){ System.out.println("Name : " + name + " Department: " + department);</pre>	
} //Tester Class	
<pre>public class TestStudent{ public static void main(String [] args){</pre>	
BBAStudent b1 = new BBAStudent(); BBAStudent b2 = new BBAStudent("Humty Dumty"); BBAStudent b3 = new BBAStudent("Little Bo Peep");	
<pre>System.out.println("1"); b2.details();</pre>	
<pre>b3.details(); } </pre>	
<pre>BBAStudent b3 = new BBAStudent("Little Bo Peep"); b1.details(); System.out.println("1"); b2.details(); System.out.println("2");</pre>	

Design the **Dog** and **Cat** class derived from the Animal class with appropriate attributes and properties so that the driver code can generate the output given below.

Driver Code and Parent Class	Output
<pre>public class Animal { public String name; public int age; public String color; public Animal(String name, int age, String color) { this.name = name; this.age = age; this.color = color; } public void makeSound() { System.out.println("Animal makes a sound"); } public String info() { return "Name: "+name+"\nAge: "+age+"\nColor: "+color+"\n"; } }</pre>	<pre>1.======= Name: Buddy Age: 5 Color: Brown Breed: Bulldog 2.======= Name: Kitty Age: 3 Color: White Breed: Persian 3.======= Brown color Buddy is barking 4.======== White color Kitty is meowing</pre>
<pre>public class AnimalTester2 { public static void main(String[] args) { Dog dog = new Dog("Buddy", 5, "Brown", "Bulldog"); Cat cat = new Cat("Kitty", 3, "White", "Persian"); System.out.println("1.======"); System.out.println(dog.info()); System.out.println("2.======="); System.out.println(cat.info()); System.out.println("3.======="); dog.makeSound(); System.out.println("4.======"); cat.makeSound(); } }</pre>	

Given the following classes, write the code for the **Cricket_Tournament** and the **Tennis_Tournment** classes derived from **Tournament** so that the following output is generated.

```
Given Code
                                                                               Expected Output
public class TournamentTester {
                                                                       Cricket Tournament Name: Default
 public static void main(String[] args) {
                                                                       Number of Teams: 0
   Cricket_Tournament ct1 = new Cricket_Tournament();
                                                                       Type: No type
   System.out.println(ct1);
   System.out.println("----"):
                                                                       Cricket Tournament Name: IPL
                                                                       Number of Teams: 10
   Cricket_Tournament ct2 = new Cricket_Tournament("IPL", 10, "t20");
                                                                       Type: t20
   System.out.println(ct2);
   System.out.println("----"):
                                                                       Tennis Tournament Name: Roland
                                                                       Garros
   Tennis_Tournament tt = new Tennis_Tournament("Roland Garros", 128);
                                                                       Number of Players: 128
   System.out.println(tt);
 }
public class Tournament {
 private String name;
 public Tournament() {
   this.name = "Default";
 public Tournament(String name) {
   this.name = name;
 public String getName(){
   return this.name;
 @Override
 public String toString(){
   return "Tournament Name: "+name;
 }
```

1	public class A{
2	<pre>public int temp = 4;</pre>
3	<pre>public int sum = 1;</pre>
4	<pre>public int y = 2;</pre>
5	<pre>public A() {</pre>
6	y = temp - 2;
7	sum = temp + 3;
8	temp-=2;
9	}
10	<pre>public void methodA(int m, int n) {</pre>
11	int x = 0;
12	y = y + m + (temp++);
13	x = x + 2 + n;
14	sum = sum + x + y;
15	System.out.println(x + " " + y+ " " + sum);
16	}
17	}
18	public class B extends A {
19	<pre>public int x;</pre>
20	<pre>public B() {</pre>
21	y = temp + 3;
22	sum = 3 + temp + 2;
23	temp-=1;
24	}
25	<pre>public B(B b) {</pre>
26	<pre>sum = b.sum;</pre>
27	x = b.x;
28	}
29	<pre>public void methodB(int m, int n) {</pre>
30	int y = 0;
31	y = y + this.y;
32	x = this.y + 2 + temp;
33	methodA(x, y);
34	sum = x + y + super.sum;
35	System.out.println(x + " " + y+ " " + sum);
36	}
37]

A a1 = new A(); B b1 = new B();	х	У	sum
B b2 = new B(b1);			
a1.methodA(1, 1); b1.methodA(1, 2);			
b2.methodB(3, 2);			

HOMEWORK

Task 1

Complete the class ${f Dog}$ so that the desired outputs are generated properly.

Given Code	Expected Output
<pre>public class AnimalTester{ public static void main(String args[]){ Animal a1 = new Animal(); System.out.println("1"); a1.details(); System.out.println("2"); Dog d1 = new Dog(); d1.name = "Pammy"; System.out.println("3"); System.out.println("Name: " + d1.getName()); d1.details(); System.out.println("4"); d1.updateSound("Bark"); System.out.println("5"); d1.details(); }</pre>	1 Legs: 4 Sound: Not defined 2 The dog says hello! 3 Name: Pammy Legs: 4 Sound: Not defined 4 5 Legs: 4 Sound: Bark
<pre>public class Animal{ public int legs = 4; public String sound = "Not defined"; public void details(){ System.out.println("Legs: "+legs); System.out.println("Sound: "+sound); } }</pre>	
<pre>public class Dog extends Animal{ //Your Code Here }</pre>	

Design the **CheckingAccount** class derived from the Account class with appropriate attributes and properties so that the driver code can generate the output given below.

Driver Code and Parent Class	Output
<pre>public class Account{ public double balance = 0.0;</pre>	Total Checking Accounts: 0 Account Balance: 0.0 Account Balance: 100.0
<pre>public Account(double balance){ this.balance = balance;</pre>	Account Balance: 200.0 Total Checking Accounts: 3
<pre>} public double showBalance(){</pre>	,
return balance; }	
}	
<pre>//Tester Class public class TestAccount{</pre>	
<pre>public static void main(String [] args){ System.out.println("Total Checking Accounts:</pre>	
<pre>"+CheckingAccount.count); CheckingAccount c1 = new CheckingAccount();</pre>	
<pre>System.out.println("Account Balance: " + c1.showBalance()); CheckingAccount c2 = new CheckingAccount(100.0);</pre>	
System.out.println("Account Balance: " + c2.showBalance()); CheckingAccount c3 = new CheckingAccount(200.0);	
System.out.println("Account Balance: " + c3.showBalance()); System.out.println("Total Checking Accounts:	
"+CheckingAccount.count);	
} '	

Given the following classes, write the code for the Book and the CD class so that the following output is printed.

Driver Code and Parent Class	Expected Output
<pre>public class Tester6 { public static void main(String[] args) { Pack book = new Pack(1 "The Alchemist" 500 "07806"</pre>	ID: 1 Title: The Alchemist Price: 500 ISBN: 97806 Publisher: HarperCollins
Book book = new Book(1, "The Alchemist", 500, "97806", "HarperCollins"); System.out.println(book.printDetail()); System.out.println("");	ID: 2 Title: Shotto Price: 300 Band: Warfaze Duration: 50 minutes Genre: Hard Rock
<pre>CD cd = new CD(2, "Shotto", 300, "Warfaze", 50, "Hard Rock"); System.out.println(cd.printDetail()); } </pre>	
<pre>class Product { private int id; private String title; private int price;</pre>	
<pre>public Product(int id, String title, int price) { this.id = id; this.title = title; this.price = price; }</pre>	
<pre>public String getIdTitlePrice() { return "ID: " + id + " Title: " + title + " Price: " + price; } }</pre>	

Given the following classes, write the code for the **CSEStudent** class derived from **Student** so that the following output is generated.

Design the ${\it ComplexNumber}$ class with the necessary property to produce the output from the given driver code.

Driver Code and Parent Class	Output
<pre>public class RealNumber { public double realValue; public RealNumber() { this(0.0); } public RealNumber(double realValue) { this.realValue = realValue; } public String toString(){ return "RealPart: " + realValue; } } public class ComplexNumberTester {</pre>	RealPart: 1.0 ImaginaryPart: 1.0 RealPart: 5.0 ImaginaryPart: 7.0
<pre>public static void main(String[] args) { ComplexNumber cn1 = new ComplexNumber(); System.out.println(cn1); System.out.println(""); ComplexNumber cn2 = new ComplexNumber(5.0, 7.0); System.out.println(cn2); } </pre>	

```
public class A{
       public static int temp = 3;
3
       public int sum;
4
       public int y;
5
       public A(){
6
           y = temp - 1;
7
           sum = temp + 2;
8
           temp-=2;
9
       }
10
       public void methodA(int m, int [] n) {
11
           int x = 0;
12
           y = y + m + (temp++);
13
           x = x + 2 + (++n[0]);
14
           sum = sum + x + y;
15
           n[0] = sum + 2;
           System.out.println(x + " " + y + " " + sum);
16
17
       }
18 }
19 class B extends A {
20
       public static int x = 1;
21
       public B(){
22
           y = temp + 1;
23
           x = 3 + temp + x;
24
           temp-=2;
25
       }
26
       public B(B b) {
27
           sum = b.sum + super.sum;
28
           x = b.x + x;
29
       }
       public void methodB(int m, int n) {
30
31
          int [] y = {0};
32
           super.y = y[0] + this.y + m;
           x = super.y + 2 + temp - n;
33
           methodA(x, y);
34
35
           sum = x + y[0] + super.sum;
           System.out.println(x + " " + y[0] + " " + sum);
36
37
       }
38
```

int x[] = {23};	Output		
A a1 = new A();			
B b1 = new B();			
B b2 = new B(b1);			
a1.methodA(1, x);			
b2.methodB(3, 2);			
a1.methodA(1, x);			

Ungraded Tasks (Optional)

(You don't have to submit the ungraded tasks)

Task 1

Given the following classes, write the code for the **Player** and the **Manager** classes derived from SportsPerson class so that the following output is printed. To calculate the match earnings use the following formula:

- 1. Player: (total_goal * 1000) + (total_match * 10)
- 2. Manager: match_win * 1000

Given Code	Expected Output
<pre>public class PlayerTester { public static void main(String[] args) { Player playerOne = new Player("Al-Nassr", "Ronaldo", "Striker", 25, 32); playerOne.calculateRatio(); playerOne.printDetails(); System.out.println(""); Manager managerOne = new Manager("Real Madrid", "Zidane", "Manager", 25); managerOne.printDetails(); } }</pre>	Name: Ronaldo, Team Name: Al-Nassr Team Role: Striker Total Goal: 25, Total Played: 32 Goal Ratio: 0.78 Match Earning: 25320K Name: Zidane, Team Name: Real Madrid Team Role: Manager Total Win: 25 Match Earning: 25000K
<pre>class SportsPerson { private String team; private String name; public String role; public double earningPerMatch;</pre>	
<pre>public SportsPerson(String teamName, String name, String role){ this.team = teamName; this.name = name; this.role = role; this.earningPerMatch = 0; }</pre>	
<pre>public String getNameTeam() { return "Name: " + name + ", Team Name: " + team; } }</pre>	

```
public class A {
2
     public static int temp = 4;
3
     public static int x = -10;
     public int sum = 0;
5
     public int y = 0;
7
     public A() {
8
       y = temp - 2;
9
       sum = temp + 1;
10
       temp -= 2;
11
13
     public void methodA(int m, int n) {
14
       int x = 0;
15
       y = y + m + (temp++);
16
       x = x + 1 + n;
17
       sum = sum + x + y;
18
       System.out.println(x + " " + y + " " + sum);
19
     }
20
   public class B extends A {
23
     public static int x = 0;
24
    public int sum = -6;
25
     public B() {
26
       sum = 0;
27
       y = temp + 3;
28
       super.sum = 3 + temp + 2;
29
       temp -= 2;
30
31
     public B(B b) {
33
       sum = b.sum + super.sum;
34
       x = b.x;
35
       b.methodB(2, 3);
```

```
36
37
     public void methodB(int m, int n) {
38
       int y = 0;
39
       y = y + this.y;
40
       x = y + 2 + (++temp);
41
       methodA(x, y);
42
       sum = x + y + sum;
43
       System.out.println(x + " " + y + " " + sum);
44
     }
46
   }
```

Write the output of the following code:

```
public class Tester {
    public static void main(String[] args) {
        A a1 = new A();
        B b1 = new B();
        B b2 = new B(b1);
        b1.methodA(2, 3);
        b2.methodB(3, 8);
}
}

Output:

x    y    sum

A a1 = new A();
    B b2 = new B(b1);
        b1.methodA(2, 3);
        b2.methodB(3, 8);
}
```
